PROFESSIONAL SUMMARY

Data-driven Full Stack Developer with 3+ years of experience building 20+ applications across healthcare, ERP, and AI systems. Strong in SQL, data modeling, and workflow analysis, with a focus on identifying process inefficiencies and delivering scalable, data-backed solutions. Experienced in collaborating with stakeholders and translating business challenges into measurable impact.

EXPERIENCE

Digital Strategy & Web Development – Best Digital Marketing

Remote

- Led digital growth initiatives by aligning SEO, content, and web development with business objectives.
- Collaborated with stakeholders to optimize user journeys, improving engagement and conversion rates.
- Translated marketing and sales requirements into scalable web solutions and measurable outcomes.

Freelance Full Stack Developer

Remote — 2021 – Present

- Delivered 20+ applications and ERP systems while working closely with founders and stakeholders.
- Led requirement discussions, translated business needs into technical solutions, and ensured successful delivery.
- Identified workflow bottlenecks and automated processes, reducing manual effort by up to 40%.
- Designed and optimized SQL queries and data models for performance-critical workflows and data operations.
- Analyzed system and workflow data to identify inefficiencies and improve operational performance.
- Conducted demos and walkthroughs, clearly communicating technical decisions and business impact.

Software Intern – Quotr.io (California, USA)

Jul 2024 – Aug 2024

- Collaborated with cross-functional frontend and backend teams in a global startup environment.
- Built and integrated backend APIs improving system interoperability and data flow.
- Developed web scraping pipelines and structured data workflows for downstream processing.
- Contributed to full stack integration, ensuring seamless communication between frontend and backend systems.
- Participated in async communication, sprint discussions, and requirement alignment across time zones.

KEY PROJECTS

Healthcare Management System (HMS)

- Digitized hospital workflows including appointments, billing, and patient records.
- Analyzed and structured hospital workflows, improving process visibility through dashboards and data-driven insights.
- Stack: React, Node.js, PostgreSQL, AWS.

Jewelry ERP System

- Built ERP system managing 5K+ inventory with real-time tracking and automated workflows.
- Enabled data-driven decision making by analyzing sales and operational data through dashboards.
- Stack: Next.js, Supabase, PostgreSQL.

AI-Powered Task Management Platform

- Developed AI-driven workflow system to structure tasks and improve execution efficiency.
- Centralized project data (documents, links, media) to enhance team coordination.
- Designed scalable backend with Supabase and implemented secure OAuth authentication.
- Stack: Next.js, Supabase, Gemini API.

TECHNICAL SKILLS

Languages: JavaScript, Python, Java

Data: SQL, PostgreSQL, MySQL, Data Modeling, Data Analysis

Frameworks: React, Next.js, Node.js

Cloud: AWS, Docker, CI/CD

Core: Process Optimization, Workflow Automation, API Integration, Stakeholder Communication

EDUCATION

B.Sc. (Hons) in Computer Science

2022 – 2026

RV University, Bangalore
